

Remarks

All objections to the specification have been overcome by amendment. The rejection of Claims 39-44 has been overcome by amendment. Specific reference to shut off valves has been removed from claims 39-40 and "apparatus for stopping flow" has been substituted. The specification clearly refers to stopping flow of water vapor and water and it is clear to one skilled in the art that the supply means for water vapor and hot water therefore embed structure to stop the flow.

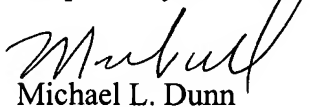

The means for stopping the flow may be embedded valves or any other means well known to those skilled in the art for stopping flow. The Examiner is referred to page 3, line 26, the bottom of page 6 and lines 13-15 of the original specification.

Allowance of claims 23-38 is noted with appreciation.

Conclusion

Applicant respectfully submits that all pending claims are now in condition for allowance, which action is courteously requested.

Respectfully submitted,

Michael L. Dunn
